Education

B.Tech – Computer Science Engineering 2024–2028

Sardar Vallabhbhai National Institute of Technology (SVNIT), Surat

Class XII – CBSE 2023–2024

International Indian School, Dammam

Class X – CBSE 2019–2020

International Indian School, Dammam

Experience

1. Full-Stack Intern — Eram Holdings *MERN Stack, AWS S3, XLSX (Excel parsing), pdf-lib (Certificate generation)*

- Designed a multi-tenant authorization layer using JWT authentication and organization-scoped access control for corporate onboarding, compliance training, assessments, and employee certification, reducing manual training management by 40% through workflow automation.
- Implemented JWT-based SSO, multi-tenant architecture, and role-based access control to securely support multiple organizations from a single platform.
- Engineered a vector search pipeline using Retrieval-Augmented Generation and vector embeddings, enabling fast contextual retrieval across enterprise documentation.
- Designed backend workflows for Learning Needs Analysis, supporting bulk Excel ingestion, automated quiz assignment, progress tracking, and real-time leaderboards. Automated certificate generation with QR-based verification, cryptographic validation, and AWS S3 storage, streamlining certification management and verification.

Projects

1. AI project — Multilingual Sign & Speech-to-Text *Python, OpenAI Whisper, Deep Learning, PyTorch*

<https://github.com/price-2006/aiproject>

- Fine-tuned Whisper for multilingual speech recognition using a curated dataset.
- Trained a custom CNN-based sign language recognition model using PyTorch and OpenCV.
- Built an end-to-end inference pipeline combining speech recognition, gesture recognition, and multilingual translation.

2. FinTwin AI — Autonomous MSME Credit Intelligence Platform *Python, FastAPI, XGBoost, SHAP, Groq LLM (Llama 3), FAISS, NetworkX, React*

<https://github.com/user-houseplant/IDBI>

- Built an autonomous MSME credit platform that builds a "Living Digital Twin" from alternative data (UPI, GST, Account Aggregator) to evaluate "New-to-Credit" businesses banks typically reject.
- Built an XGBoost risk-scoring engine with SHAP explainability for transparent, regulation-compliant credit scores instead of a black-box number.
- Integrated a Groq Llama-3.1 LLM with FAISS-based RAG to auto-generate underwriting reports, plus a "What-If" simulator for real-time re-scoring.
- Built a NetworkX supply-chain graph module that factors supplier health into credit risk.

3. Computer Vision Project — Smart Parking Detection System *Python, YOLO, OpenCV* **SPECTRA SCIENCE EXPO 2023, 1st PLACE**

<https://github.com/emilmariagiby/parking-spot-detection>

- Developed a Real-time occupancy detection system processing 500+ video frames with YOLO-based vehicle detection
- Optimized inference pipeline with OpenCV; performance analysis using NumPy and Pandas
- Demonstrates end-to-end solution delivery from research to deployment and ability to win external competition.

4. Splunk Co>Dev — AI Engineering Copilot for Splunk Development *React, Node.js, Express, Groq, Splunk, HTTP Event Collector*

<https://github.com/emilmariagiby/splunk-co-dev>

- Developed an AI-powered developer copilot for Splunk that lets users debug search queries, auto-map log fields to data standards, and deploy dashboards and alerts using plain English- no manual configuration required, with full observability by the team.
- Engineered a deterministic safety layer that intercepts and blocks dangerous queries before they hit the AI or execute against the platform, ensuring zero-latency enforcement with no risk of model hallucination on critical decisions.

5. Bloom Branding Platform *React, Node.js, Express, MongoDB*

GOOGLE Winter of Code (GWOC) 2026, 1st PLACE

<https://bloom-branding-3bdab.web.app/>

<https://github.com/DevangiSingh98/Bloom-Branding---Team-DEAN-GWOC-26>

- Developed a portfolio management platform enabling agencies to manage branding projects and digital assets.
- Built responsive animated interfaces using React, GSAP, and Framer Motion.
- Designed REST APIs for project management, image uploads, and content delivery.

Technical Skills

Languages: Python, JavaScript, C, C++, SQL

Backend & APIs: Node.js, Express.js, REST APIs, JWT Authentication, Role-Based Access Control (RBAC), Multi-Tenant Architecture, FastAPI

Databases: MongoDB, PostgreSQL, MySQL, Firebase, Vector Databases

AI Coding Tools: Retrieval-Augmented Generation (RAG), Vector Embeddings, XGBoost, SHAP, OpenCV, PyTorch, Whisper, Scikit-Learn, Pandas, Numpy, faiss-cpu, sentence-transformers, networkx

Cloud & Dev Tools: AWS S3, Git, GitHub, Postman, Vercel, Render, VS Code

Frontend: React.js, HTML5, CSS, GSAP, Framer Motion

Core CS: OOP, Data Structures & Algorithms, Dynamic Programming

Testing & Validation: Postman (API testing, collections), manual E2E test design, validation pipelines, performance benchmarking

Achievements

- 1st Place** — GOOGLE Winter of Code (GWOC 2026)
- SPDC Merit Scholarship** — GOVERNMENT OF INDIA
- 1st Place** — SPECTRA Science Expo 2023
- Silver Honor** — Class XII Academic Excellence
- Gold Honor** — Class X Academic Excellence

Leadership

- Junior Developer** — DSC SVNIT
- Media Team Executive** — ACM SVNIT
- Member** — Cinephilia Club
- Member** — CONVEX Photography Club
